

Custom Speaker Socks

Delivery & File Formats

Contact marketing@tectonicaudiolabs.com prior to uploading files. We will provide you with a private DropBox folder.

- NATIVE FILES ONLY from Adobe Illustrator, Photoshop, or InDesign (NOTE: some templates may list specific options from the above choices).
- DO NOT send PDF or EPS files exported from these documents as your final layout.
- Convert all fonts to Outlines (Illustrator and InDesign), or rasterize them (Photoshop). This includes any linked images/document used inside your layouts (ie: vector Illustrator logos linked into InDesign).
- If working in Adobe InDesign, DO NOT send files that use text frame anchor boxes as placement holders for copy that has been converted to outlines. This results in font errors and your file will be rejected. You must supply a file that contains no text or font objects at all.
- Please provide a 2" bleed on all layouts unless otherwise noted on your product template. If no template is located online, please call and one will be provided.
- DO NOT embed your raster images into your layout program (ie: Illustrator). Please "link" these images using the appropriate procedure according to your software.
- Include any linked or placed files with your uploaded documents. Do not place .EPS raster images in your layout program.

- Save .EPS raster images as Level 12 JPG images or TIF/PSD files before placing them into your layout program.
- Resolution at 100% should be 100 ppi/dpi for raster images.
- CMYK color spaces are required, but leave Pantone fills inside your files rather than converting to CMYK.
- **Include a preview low resolution JPG of your layout with PMS #'s called out if color is critical.**
